

Geographic Information Systems (GIS) offers data integration and high-quality, customized presentations for a variety of project needs.

Landmark Science & Engineering’s GIS, CADD, engineering and environmental staff is supported by state-of-the-art computer and software facilities, including high-end workstations and wide-format, color plotters and wide-bed scanner, that support ESRI ArcGIS 10 v.10 software. The GIS staff is experienced in accessing a wealth of data available at Federal, State and County levels for effective site analysis.

Screening for wetlands, soils, floodplains, topography, forest, and land use

Analyzing environmental issues

Combining engineering drawings with conceptual schematics

Presentations to regulators, policymakers, and the public

High-quality displays for major presentations
